

# PMIP4 GLAC-1D ice-sheet data

## Grid

- nb\_lat, nb\_lon = 360, 360
- latitude\_values = [ -89.75, -89.25, -88.75, ... 88.75, 89.25, 89.75 ]
- longitude\_values = [ 0.5, 1.5, 2.5, ... 357.5, 358.5, 359.5 ]
- time axis: see the *Time steps* section below

## Time steps and data files

- 261 time steps in one file, from 0k to 26k : data every 100 years, from 0k to 26k BP
- time\_values = [ -26. , -25.9, -25.8, ... -0.2, -0.1, 0. ]
- all the variables and all the time steps are in the same file:  
TOPicemsk.GLACD26kN9894GE90227A6005GGrBgic.nc

## Variables

- **HDC**: GLAC contemp. elevation(masl), meters
  - on continents (including ice sheets) and ice shelves: surface altitude (including ice sheets/shelves)
  - on ice-free ocean: bathymetry
- **HDCB**: GLAC contemp. elevation(masl), bathymetry for floating ice, meters
  - on continents (including ice sheets) and ice shelves: surface altitude (including ice sheets)
  - on ice-shelves: altitude of the bottom of the floating ice
  - on ice-free ocean: bathymetry
- **ICEM**: GLAC ice mask, fraction
  - ice fraction values between 0.0 (no ice) and 1.0 (100% ice)

Notes:

- The land-sea mask can be computed with:
  - $HDCB > 0$  : ls\_mask = 1 (land)
  - $HDCB \leq 0$  : ls\_mask = 0 (no land)
- Computing the HDC - HDCB difference yields:
  - ice-shelves thickness where there are ice shelves
  - 0.0 everywhere else

## Download

You will find below a table with all the available data files, and their *md5sum* checksum (if you want to check that you download was OK, you can just type `md5sum file.nc` and compare the result to what is displayed in the table).

If you want to download a file, click on the [ice\\_sheet download link](#) and then on the file you need. The files are currently protected by a password. Get in touch with [Jean-Yves Peterschmitt](#) if you need to access them.

Groups running the lgm experiment have to use the GLAC-1D.sftlf.21\_DIRTY-CASPIAN.nc land-sea mask file, where the Caspian sea has been set to the modern Caspian sea in the land-sea mask variable.

The files for the entire deglaciation have **not** been modified accordingly yet.

md5sum output	Data file
3796bd615de2811f593483d648b94562	GLAC-1D.sftlf.21_CASPIAN.nc
e8be8847a4dabd0a446682d51f6d77c3	TOPicemsk.GLACD26kN9894GE90227A6005GGrBgic.nc
