

# Design for the LGM run

You will find on this page information about the experiment design for the PMIP4 [Last Glacial Maximum](#) experiment.

Please make sure to read the [Associated publications](#) before setting up your experiments or using the output data, and read any *how-to* sections associated with specific boundary conditions.

<b>PMIP4-CMIP6 specifications</b>	
Topography and coastlines	Modified <a href="#">Access to data</a>
Volcanic activity	Same as in CMIP6 piControl
Aerosols	Modified sources, atmospheric concentrations or radiative forcing, depending on model complexity and model configuration used for DECK and historical experiments cf. documenting papers: Kageyama et al, in prep and Kageyama et al, subm. <a href="#">Access to data</a>
Vegetation	Depending on model complexity and model configuration used for DECK and historical experiments: Interactive vegetation <b>or</b> Interactive carbon cycle (LAI) <b>or</b> Prescribed to present-day values or mid-Holocene values computed from off-line vegetation model The methodology to represent vegetation should be the same as for the CMIP6 piControl simulation cf. documenting papers: Kageyama et al, in prep and Kageyama et al, subm.
