

# Design for the last Interglacial (at 127 ky BP) run

You will find on this page information about the experiment design for the PMIP4 [last Interglacial \(at 127 ky BP\)](#) experiment.

Please make sure to read the [Associated publication](#) before setting up your experiments or using the output data, and read any *how-to* sections associated with specific boundary conditions.

Get in touch with the following people if you have questions:

## Associated publication

Otto-Bliesner et al, submitted

## Specifications

|                           | PMIP4-CMIP6 specifications  |
|---------------------------|---|
| PMIP4-CMIP6 name          | <b>lig127k</b>  |
| Astronomical parameters   | <b>eccentricity</b> = 0.039378<br><b>obliquity</b> = 24.04°<br><b>perihelion-180°</b> = 275.41°<br><b>Date of vernal equinox</b> : March 21 at noon   |
| Trace gases               | <b>CO<sub>2</sub></b> = 275 ppm<br><b>CH<sub>4</sub></b> = 685 ppb<br><b>N<sub>2</sub>O</b> = 255 ppb<br><b>CFC</b> = 0<br><b>O<sub>3</sub></b> = same as in CMIP6 piControl  |
| Solar activity            | Same as in CMIP6 piControl (TSI = 1360.747 W.m-2)   |
| Ice sheets                | Same as in CMIP6 piControl  |
| Topography and coastlines | Same as in CMIP6 piControl  |
| Volcanic activity         | Same as in CMIP6 piControl  |
| Aerosols                  | Modified sources, atmospheric concentrations or radiative forcing, depending on model complexity and model configuration used for DECK and historical experiments<br>cf. documenting papers: Otto-Bliesner et al, in prep and Kageyama et al, subm.<br><a href="#">Access to data</a> |

|            | PMIP4-CMIP6 specifications   |
|------------|--|
| Vegetation | <p>Depending on model complexity and model configuration used for DECK and historical experiments:<br/>Interactive vegetation <b>or</b> Interactive carbon cycle (LAI) <b>or</b> Prescribed to present-day values or lig127k values computed from off-line vegetation model</p> <p>The methodology to represent vegetation should be the same as for the CMIP6 piControl simulation<br/>cf. documenting papers: Otto-Bliesner et al, in prep and Kageyama et al, subm.</p> |

## Collaboration

- The PMIP4-CMIP6 **lig127k** simulation is being coordinated with [ISMIP6](#). The output from the lig127k simulation will be used by ISMIP6 to force standalone ice sheet experiments (*lastInterglacialforcedism*). This will increase our understanding of the sensitivity of the ice sheets, complementing the suite of standalone ISMIP6 ice sheet experiments.
- The PMIP4-CMIP6 **midHolocene** and **lig127k** simulations are also expected to be relevant to analyses in [SIMIP](#)'s assessment of the role of sea-ice changes in climate changes and [AerChemMIP](#)'s assessment of the role of dust

## Sensitivity experiments

### Sensitivity to Prescribed Vegetation

### Sensitivity to Prescribed Ice Sheets

### Simulation to explore the effects of the H11 event
